

In one sentence

Option A

right° provides transparency on the climate impact of economic activities – plain & simple in °C.

Option B

right° is a climate tech company developing metrics and software to provide transparency on the climate impact of economic activities - plain & simple in °C.

About right°

right. based on science GmbH (right°) is a climate tech company that provides transparency on the climate impact of economic activities – plain & simple in °C

right°'s software and metrics enable decision makers from the real economy, finance, and real estate to plot pathways to 1.5°C alignment and to let their climate-related decisions be guided by the best available science and data.

right° was founded by Hannah Helmke and Dr. Sebastian Müller in 2016 and is a pioneer of so-called 'temperature alignment' or 'implied temperature rise' (ITR) metrics. Its unique **X-Degree Compatibility (XDC) Model** is science-based and peer-reviewed. It has been available for free use to academia since 2019 through the project right. open. At the end of 2021, it was released it under an open license (open source).

The interdisciplinary team of nearly 40 experts is dedicated to continuously improving and expanding the XDC Model. right° also offers comprehensive services around the implementation and application of its software. The aim is to help shape a future, in which economic success is no longer dependent on emissions.

In 2020, right° was awarded the prestigious Next Economy Award. Hannah Helmke received the Digital Female Leader Award ('Sustainability' category) in the same year as well as the Female Founders Award by AmCham Germany in 2021.
